

Video and Multimedia Delivery Systems

Product Description:

Convenience Learning International's (CLI) video and multimedia delivery systems are uniquely designed to fulfill educational institutions need for communicating multimedia information to students, faculty and administration personnel. Our delivery systems can provide one-on-one learning experiences or can be made available to large groups in multiple locations. CLI uses three inventive technologies: Video Multicast, Video Server, and Video Conferencing. All of our product solutions can include desktop computers, file servers, network switches and bandwidth management software that make Video-On-Demand available to individual classrooms, research labs, and entire school systems. Each of these technologies can be installed separately, to work alone, or combined to provide a complete digital video solution. Our integration expertise allows our clients to leverage their investment in their existing technology infrastructure and supplement it with only the additional encoders, switches and/or video conferencing servers needed to meet their educational objectives.

Features: Streaming Video Technology

- Supports broadcast-quality, standards-based video formats
- Multicasts live and recorded media content
- Uses standard media players
- Scalable – Scales to as many multicast channels and recording servers as required by applications
- Real Time Audio/Video provides video conferencing via Internet/Intranet to remote classrooms and buildings

Benefits: Streaming Video Technology

- Reduces travel and equipment costs
- Increases access to diverse curriculum in different locations
- Better use of resources, including personnel, curriculum and technology
- Increases access to administration and faculty
- Improves productivity
- Provides access to new multimedia curriculum
- Improves communications
- Access to new multimedia curriculum

Streaming Technology in the Classroom
